THP0301 Passive Voltage Probes

The THP0301 probes are 300 MHz, 10X passive voltage probes with 10 M Ω input resistance. These probes are for use with the THS3000 Series oscilloscopes and are color coded to match the oscilloscope's channel input connectors, front-panel channel selector buttons, and the displayed waveforms.

Safely Measure from mV to kV

The THP0301 probes have a CAT III safety rating which matches the safety rating on the THS3000 Series oscilloscopes enabling you to safely measure voltage ranges from mV to kV. You'll be able to measure anything from micro-electronics to heavy-duty medium-voltage electrical applications, making it possible to obtain accurate measurements in mixed-signal environments with separate ground references.
